Dale,

Per our conference call last week, attached is a color plan view and typical detail for you to begin preparation of permitting items for the Gateway Marina nitrogen BMP. All resource areas and anticipated disturbances are shown in color for easy reference. Note that the BMP design details may change somewhat between now and the conclusion of final design, however we don't anticipate any further resource area disturbances or impacts.

Regarding changes from the previous plan, the proposed BMP has been enlarged somewhat from the last time you saw it to maximize stormwater treatment in the space available. Otherwise, the layout and general function remain the same.

I've also provided photos that outline some potential landscaping options for the final design.

If you have any questions or need any revisions, please let me know.
